SUMMARY

Senior Software Engineer with 9+ years of experience designing and operating high-scale distributed systems in enterprise SaaS environments. Specializes in containerized microservices using Go and PHP and event-driven architectures with Kafka, RabbitMQ and Kubernetes, powering 10M+ daily events and 45M+ active mobile passes. Expertise in evolving backend architectures and enhancing observability for reliable production services.

TECHNICAL SKILLS

- **Languages:** Go, PHP (Laravel)
- **Architecture:** Distributed systems, Event-driven systems, Microservices
- **Messaging & Protocols:** Apache Kafka, RabbitMQ, gRPC, Protobuf
- **Data:** MySQL, Elasticsearch, Redis, MongoDB
- **Infrastructure:** Docker, Kubernetes, Public Cloud Infrastructure
- **Tools & Methodologies:** Jira, Notion, Agile Software Development
- **AI & Productivity:** Claude Code, multi-agent workflows, MCP integrations

PROFESSIONAL EXPERIENCE

Brevo

Software Engineering Manager (Hands-on)

Feb 2025 - Feb 2026

Led engineering for a high-scale enterprise Wallet Management platform.

- Managed 3 direct reports while providing technical leadership across an 8-engineer backend team, adopting agile software development practices to streamline sprint planning and delivery.
- Owned and evolved backend architecture (PHP monolith, shared services, Go microservices) supporting 10M+ daily events using RabbitMQ, Apache Kafka, and Elasticsearch, and integrated public cloud infrastructure components for compute, caches, and databases to improve scalability.
- Contributed to a platform managing 45M+ active mobile passes across 100+ enterprise brands.
- Migrated performance-critical components from PHP to Go, demonstrating a language-agnostic approach to utilizing the best tools for high-throughput reliability.
- Designed and scaled high-performance containerized microservices using Docker and Kubernetes, implementing gRPC and Protobuf for low-latency internal APIs and efficient payload serialization across Kafka and RabbitMQ event streams.
- Strengthened observability using OpenTelemetry, reducing incident rate and improving production diagnostics.
- Collaborated with data and business teams to expose scalable APIs across Brevo's ecosystem, participated in code reviews, and provided feedback on technical designs to ensure maintainable and testable code.
- Co-led product roadmap alignment with Customer Success and stakeholders.
- Worked closely on CI/CD with DevOps Engineers (Terraform, Github Actions, ...)

Lead Software Engineer

Mar 2024 - Feb 2025

Captain Wallet

Backend Lead Developer

Jan 2024 - Mar 2024

Led backend technical strategy prior to and during acquisition by Brevo.

- Owned architecture of a high-scale SaaS backend managing 30M+ mobile passes.
- Designed and maintained distributed systems using PHP (Laravel), RabbitMQ, Apache Kafka, and Elasticsearch.
- Built and scaled 10+ Go microservices for high-performance event processing.
- Maintained 100+ client-specific integration packages for enterprise brands.
- Mentored engineers through code reviews, pair programming, and technical coaching.

Senior Backend / Full Stack Engineer

Oct 2017 - Jan 2024

- Designed and implemented backend services supporting large enterprise marketing campaigns via Apple & Google Wallet.
- Built distributed systems with PHP (Laravel) and Go.
- Developed advanced targeting and search features leveraging Elasticsearch.
- Contributed to frontend architecture using VueJS.

Batiactu Groupe

Junior Web Developer

Apr 2016 - Oct 2017

EDUCATION

Professional Bachelor's Degree, Distributed Systems & Application Development (CASIR)

IUT Valence

2016 - 2017

Valence, France

Diploma of Technology, Computer Science

IUT Valence

2014 - 2016

Valence, France
