SUMMARY

Senior Software Engineer with 9+ years of experience designing, evolving, and operating distributed systems for enterprise SaaS. Specializes in Go, PHP, Kafka, RabbitMQ, Kubernetes, and event-driven architectures supporting 10M+ daily events and 45M+ active mobile passes. Experienced in evolving monolithic and microservice architectures, building high-throughput services, designing reliable messaging and data pipelines, and strengthening production observability. Currently building AI-native engineering systems around Hermes Agent and applying them across independent software and product-development initiatives.

SELECTED PROJECT

AI-Native Engineering Environment **Mar 2026 - Present**

- Designing and operating a self-hosted AI engineering environment around Hermes Agent, combining specialized workflows, persistent memory, reusable skills, MCP integrations, scheduled automation, and human-in-the-loop verification.
- Applying it across independent software and product-development initiatives spanning early-stage discovery, design, implementation, deployment, and observability.

TECHNICAL SKILLS

- **Languages**: Go, PHP (Laravel), JavaScript, Vue.js
- **Architecture**: Distributed systems, Event-driven systems, Microservices
- **Messaging & Protocols**: Apache Kafka, RabbitMQ, gRPC, Protobuf
- **Data**: MySQL, Elasticsearch, Redis, MongoDB
- **Infrastructure**: Docker, Kubernetes, Google Cloud Platform, AWS, Supabase

PROFESSIONAL EXPERIENCE

Brevo

Software Engineering Manager (Hands-on) *Paris, France* · **Feb 2025 - Feb 2026**

Led engineering for a high-scale enterprise Wallet Management platform.

- Provided technical leadership across an 8-engineer team while managing 3 direct reports, contributing to technical direction, delivery planning, and code quality.
- Owned and evolved backend architecture across a PHP monolith, shared services, and Go microservices supporting 10M+ daily events through RabbitMQ, Apache Kafka, and Elasticsearch; designed containerized services using Docker, Kubernetes, gRPC, and Protobuf.
- Led the build of a CDC pass-consistency pipeline (Debezium → Kafka, Redis dedup, batched Apple/Google Wallet delivery, retry + DLQ) replacing hand-triggered per-integration updates for 500+ enterprise brands.
- Migrated performance-critical components from PHP to Go and strengthened production observability with OpenTelemetry, improving reliability and production diagnostics.
- Partnered with data, business, and DevOps teams on scalable APIs, maintainable technical designs, and CI/CD workflows using Terraform and GitHub Actions.

Lead Software Engineer *Paris, France* · **Mar 2024 - Feb 2025**

Captain Wallet

Backend Lead Developer *Paris, France* · **Jan 2024 - Mar 2024**

Led backend technical strategy prior to and during acquisition by Brevo.

- Owned architecture of a high-scale SaaS backend managing 30M+ mobile passes.
- Designed and maintained distributed systems using PHP (Laravel), RabbitMQ, Apache Kafka, and Elasticsearch.
- Built and scaled 10+ Go microservices for high-performance event processing.
- Maintained 100+ client-specific integration packages for enterprise brands.
- Mentored engineers through code reviews, pair programming, and technical coaching.

Senior Backend / Full Stack Engineer *Paris, France* · **Oct 2017 - Jan 2024**

- Designed and implemented backend services supporting large enterprise marketing campaigns via Apple & Google Wallet.
- Built distributed systems with PHP (Laravel), Go and contributed to frontend architecture using Vue.js.
- Developed advanced targeting and search features leveraging Elasticsearch.

Batiactu Groupe

Junior Web Developer *Valence, France* · **Apr 2016 - Oct 2017**

EDUCATION

Professional Bachelor's Degree, Distributed Systems & Application Development (CASIR) **2016 - 2017**
IUT Valence *Valence, France*

Diploma of Technology, Computer Science **2014 - 2016**
IUT Valence *Valence, France*
